

# LeadGraph

AI-powered B2B Lead Identification

*"Potential clients want the world's most competitive products.  
The gap? Market Intelligence."*

**We help Siemens discover & qualify assay leads globally — automatically.**

Discover → Qualify → Convert

**1,306+**

Companies Scored

**< 1s**

Time to Score

# Problem Understanding & Fit

02 — What is the real lever underneath the challenge?

## Company Reality

Siemens Marburg produces biological intermediates (proteins, antibodies, latex particles, blockers) — but has no B2B structure to identify who needs them.

## The Real Question

How to discover assay leads (& convert them) globally, efficiently — across 12+ fragmented public data sources?

## 💡 Key Signal

A new FDA clearance = that company will need biological intermediates within 6–12 months.  
This is a leading indicator that nobody is connecting to B2B sales — until now.

**\$75B+**

Diagnostics market

**6% p.a.**

Annual growth

**\$50K–500K**

Revenue per assay

# Solution — How LeadGraph Works

## 03 + Architecture

1

## Ingest

12 adapters pull from FDA, ClinicalTrials, Patents, Research, GitHub

2

## Graph

Neo4j connects Company → Assay → FDA → Patent → Product Fit

3

## Score

4-factor engine: Signal + Product Fit + Segment + Recency = 0-100

4

## Act

Lead Explorer · Pipeline CRM · AI Outreach

# Scoring Algorithm

How we rank 1,306+ companies automatically

## Signal Score

0-40

40 pts

FDA clearances · Patents · Clinical Trials · Funding

## Product Fit

0-30

30 pts

Match with Siemens biological intermediate product lines

## Segment Bonus

0-20

20 pts

IVD, Point-of-Care, Research segment relevance

## Recency Bonus

0-10

10 pts

Signals from the last 6 months weighted higher

 **HOT  $\geq 70$**

Ready for outreach

 **WARM  $\geq 40$**

Promising — monitor

 **COLD  $< 40$**

Track, no action

# Demo

The screenshot shows the 'Admin' panel of the 'LeadGraph' application. The top navigation bar includes links for 'Dashboard', 'Leads', 'Pipeline', 'Graph Explorer', 'Admin' (active), and 'Graph DB'. The main section is titled 'Admin Panel' with the subtitle 'Ingest controls, scoring, and system health'. It features a 'DATA SOURCES (15)' section with a grid of source cards: 'FDA 510(k)', 'GitHub', 'ClinicalTrials.gov', 'OpenAlex', 'EPO Patents', and 'DRKS (DE)'. Each card shows its weight and a 'Run Ingest' button. The 'EPO Patents' card is marked with a red 'Error' icon. To the right, the 'SYSTEM HEALTH' section shows 'Neo4j Connected' with a green status icon. Below it, the 'SCORING SUMMARY' table displays counts for different score ranges: Hot (≥70) with 1 item, Warm (40-69) with 19 items, Cold (<40) with 1286 items, and a total of 1306 scored items. A small globe icon is visible in the bottom right corner of the interface.

# Responsible Use of AI

05 — Where AI does the work, why there, and how we keep it trustworthy

## Lead Scoring

Role: Algorithmic — not ML

Deterministic, explainable, tunable by domain experts

## Company Enrichment

Role: LLM → segment, domain, product fit

Converts free text into structured signal

## Outreach Email

Role: LLM generates first-contact email

B2B biotech outreach can't be templated

## Score Explanation

Role: LLM narrates score in plain English

Sales reps need to understand why, not just what

✓ Human-in-the-loop

✓ Explainable scores

✓ No black boxes

✓ GDPR-friendly opt-out

✓ All AI output is labeled

# Business & User Value

06 — What changes for Siemens, users, and the process

|                   | BEFORE   | AFTER           |
|-------------------|----------|-----------------|
| Leads Identified  | → 0      | 1,300+          |
| Time to Score     | → Weeks  | Seconds         |
| Data Sources      | → 0      | 12 automated    |
| Pipeline Tracking | → None   | Full Kanban CRM |
| Outreach          | → Manual | AI-generated    |

Sales focuses on calls, not scraping the internet · Fast reaction to FDA approvals, clinical trials & patents · Management gets full pipeline visibility

# Feasibility & Next Steps

07 — Realistic path to production

✓ **Production-ready stack — Dockerized, API-first, one command to deploy**

**Weeks 1-2**

Fine-tune scoring with Siemens domain experts

**Weeks 3-4**

Add LinkedIn MCP + API access to further data sources

**Weeks 5-6**

Enterprise CRM integration + workflow fitting

**Weeks 7-8**

User testing with 3 sales teams → iterate

**Month 3**

Pilot rollout with 10 sales reps

**Month 4-6**

Full production deployment

**Risk: Scoring accuracy needs validation → Mitigated by explainable scores + human override at every decision point.**  
**Open question: Which product lines to prioritize?**  
**→ Needs Siemens domain input.**

# LeadGraph

From market intelligence gap → to 1,300+ scored leads, in seconds.

AI Backbone → LLM + Graph + Domain = Business Success
